

We design, manufacture and install prefabricated industrial solutions featuring international standards. Our goal is to provide integrated solutions based on quality and maximum customization at the technical requirements of each project.

Our experience is reflected in all our products of the housing series, which are certified by ISO 9001:2000 and CE, ensuring quality and reliability.

The «Shelter» is a complete solution of electrical distribution, automation and control. It is designed to meet the requirements of a production system of electricity from renewable energy sources, which is connected to the network and is manufactured and delivered in order to minimize installation time and achieve overall cost reduction.

1 TECHNICAL DETAILS

- Heavy duty steel frame
- Polyurethane Panel Walls - Antistatic Floor
- Heavy duty Aluminum Profiles - Steel doors
- Cables - Grounding - Lightning Protection
- Fastening Systems - Security Specialist - Security Lighting
- Separate sections for the inverter, transformer and MV switch
- Ventilation Systems - Special Insulation Materials

2 ADVANTAGES

- Zero Maintenance
- Flexible Installation
- Customized upon requirements
- Overall cost reduction

3 APPLICATIONS

- Renewable Energy Projects
- Electricity Substations
- Telecommunication Base Stations
